

Which Paid Plan Would You Use?

Compare the work you actually do with the extras a plan adds. Start with one recurring task you can test.

Copy this prompt

Help me compare ChatGPT Plus, Google AI Pro and Claude Pro for these tasks: [list]. Use current official plan information I provide. Separate included features, limits and account restrictions. Leave unverified claims blank. Recommend a paid plan only when a specific extra solves a problem I have observed.

Your checklist

1. ChatGPT Plus

Offers broader model/tool access and higher limits than Free. Check the current features available to your account for the research or image work you actually do.

2. Google AI Pro

Includes Gemini benefits in Gmail and Docs and storage benefits. Confirm the current membership's storage, eligibility and included apps before choosing.

3. Claude Pro

Adds usage compared with Free and priority access. Usage limits still apply. Do not choose it solely for Projects: verify whether your needs are already covered by your current plan.

4. Run the same task

Record output quality, required features and where the free plan stopped you. Compare current billing terms before paying. Avoid paying for a feature you will not use.

Worked example

Comparison notes: task []; frequency []; free-plan result []; missing feature or limit []; paid feature that fixes it []; official source/date []; decision [].

Your next check

Review my comparison notes. Identify which claimed benefits I actually tested, which remain assumptions, and whether continuing with a free plan meets the stated need.
